
Regional Headquarters Design & Development

Working under significant budget limitations, McCASLIN ASSOCIATES designed an elegant new regional headquarters for a large service organization.

A prestigious front facade greets visitors and guests as they approach the building. Expressing light and sculptural form throughout the structure, this innovative design conducts natural light, allowing it to filter freely into all the office and warehouse areas.

In a marriage of form and function, McCASLIN ASSOCIATES used a simple tilt wall design, enhancing it with creative features to bring presence and beauty to the building.
