
Industrial Headquarters & Manufacturing Facilities Design, Development, & Construction

A growing manufacturer of precision tooling devices chose McCASLIN ASSOCIATES to design and build their North American Headquarters location. The goal was to design a state of the art facility to meet the often conflicting requirements of a headquarters location, a manufacturing operations, and a regional distribution center. The efficiency of the new facility contributed to revenue growth and an accelerated schedule for a phase two addition.

McCASLIN ASSOCIATES served as both Architect and Construction Manager on both phases of this project.
